

MAYANK KUMAR JHA

AI-Augmented Full-Stack Engineer • React / Node.js / LLM Integration
+91-9899177436 | yash91597p@gmail.com | [Linkedin](#) | [GitHub](#) | Delhi, India

PROFESSIONAL SUMMARY

Results-driven Full-Stack Engineer with hands-on expertise in React, Node.js, and JavaScript, specializing in integrating Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) systems using Gemini AI, Pinecone, and Redis. Proven ability to architect and ship production-grade AI applications, real-time platforms, and identity verification systems. Passionate about building scalable, intelligent systems at the intersection of modern web architecture and AI automation.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, Java, C++
Frontend	React.js, Next.js, Tailwind CSS, React Native, Expo, HTML5, CSS3
Backend	Node.js, Express.js, REST APIs, JWT Authentication, MVC Architecture, BullMQ
Databases	PostgreSQL, MongoDB, Firebase Firestore, Redis, Prisma ORM, Sequelize
AI / ML	Gemini API (1.5 Pro, Flash, Vision), Pinecone Vector DB, RAG Systems, LLM Integration
Tools & DevOps	Git, GitHub, Docker, Postman, Socket.IO, Stripe Connect, Google Maps API

EXPERIENCE

Full-Stack Developer Intern | [Launched Global](#) Aug 2025 – Feb 2026

Tech Stack: Firebase Firestore, PostgreSQL (Sequelize), Google Maps API, Socket.IO, Stripe Connect, Node.js, MongoDB (MERN)

- Built Navigate Her — a women's safety ride-sharing platform with a proprietary Safest Route algorithm (Google Maps API), real-time driver matching via Socket.IO, and full payment lifecycle managed through Stripe Connect.
- Designed a dual-database architecture (Firebase for real-time state + PostgreSQL for transactional records) and implemented an end-to-end MERN data pipeline, improving reliability and reducing manual overhead.
- Diagnosed and resolved critical backend failures including broken API routes, middleware misconfigurations, and async error-handling gaps, restoring stability across production workflows.

PROJECTS

Kaaya — Intelligent Hyper-Assistant | [Personal Project](#) | [Project Link](#) Jan 2025 – Present

Tech Stack: Node.js, React Native (Expo), Gemini 1.5 Pro/Flash, Pinecone, Redis, BullMQ, Socket.IO, Prisma, Baileys API

- Engineered a Gemini 1.5 Pro/Flash-powered digital executive assistant with Pinecone-based RAG for persistent long-term memory, unifying WhatsApp, Google Workspace, and real-time scheduling into a single context-aware hub — reducing context-switching by ~60%.
- Architected a high-performance async backend using BullMQ and Redis queues achieving sub-200ms response times; delivered a React Native interface with Dynamic Island status updates and hands-free task automation via Baileys API.
- Integrated HuggingFace Inference API for on-demand AI image generation and implemented live screen sharing, expanding the assistant's multimodal capabilities beyond text-based interactions.

Edura AI — Identity Verification Platform | [Amity Hackathon](#) • [Top 4](#) Oct 2024

Tech Stack: React, Node.js, Express.js, Google Gemini Vision API, PostgreSQL

- Built a full-stack identity verification system to combat educational loan fraud, integrating Google Gemini Vision API for automated document extraction and field-by-field comparison — achieving 100% data match accuracy in testing.
- Delivered a working multimodal AI product within hackathon time constraints, demonstrating rapid prototyping and cross-functional execution under pressure.

EDUCATION

B.Tech — Computer Science Engineering | [Galgotia University, Greater Noida](#) 2022 – 2026

Relevant: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOP

Higher Secondary (XII) — 84% | Secondary (X) — 83% Kamal Public School, New Delhi • 2021

CERTIFICATIONS

Full Stack Web Development — The Odin Project Artificial Intelligence & Machine Learning — Coursera
